EQUIPMENT

- W 800 mm x L 600 mm x H 1000 mm
- 300 l nominal volume
- Inner container made of high-density polyethylene
- Fulfils the specifications in accordance with FDA/EN 10/2011
- Galvanised, easy-to-clean tubular steel frame
- Heat-treated, stackable wooden pallet
- Filling hole with cover 150 mm Nominal diameter
- Piston valve 50 mm nominal diameter
- Identification plate
- UN approved UN 31HA1/Y/D/BAM
- Level scale
- Collection via PACKONE system

Optionally with:

- Drainage elbow
- Pressure equalisation system
- CDS withdrawal system

ECONOMICAL

- Saves space during transport, storage and in production
- Easy handling using forklifts while loading and unloading optimises process costs (No special equipment required).
- Large top opening enables quick filling – reduces foaming over.
- End users with lower supply needs (< 600 l) benefit from IBC handling.

SUSTAINABLE

- Almost 100 percent residual drainability saves material and reduces waste.
- Collection via the PACKONE system.
- Resource-conserving reuse.

SAFE

- Stable pallet with firmly attached steel frames, ensures safety in handling.
- The compact, stackable construction allows for interlocking stowage in the cargo bay. This saves time and material in securing the load.
- Residual content directly visible through transparent PE bottle and level scale.
- Tested and suitable for filling with hazardous material and foodstuff.
